Preface i
Acknowledgments i
About the Author i
Files for this Manual ii
Table of Contents iii

Exercise 1a
First Wall Features 1
Objectives 1
Designing in Sheetmetal Mode 1
Introduction 1
Introduction to Pro/ENGINEER Wildfire Sheetmetal 3
Table 1: Wall Feature Types 4
Procedure 4
1. Creating a Wall Feature Using the Extruded Option 9
Table 2: Imperial Sheet Metal Gauges 12

Exercise 1b
First Wall Features (continued) 15
1. Creating a Wall Feature Using the Flat Wall Option 15
2. Creating a Wall Feature Using the Sheet Metal Convert Option 17
Table 1: Sheet Metal Feature Conversion Options 18
References 22

Exercise 1c
Creating a Blended Wall 23
Objectives 23
Introduction 23
Procedure 23
1. Creating Walls using the Swept Wall feature 23

Exercise 2
Secondary and Unattached Wall Features 29
Objectives 29
Introduction 29
Table 1: Additional Wall Feature Options 30
Table 2: Bend Radius Options 30
Procedure 30
1. Creating Additional Wall Features Using the Flat Option with Radius 30

2. Creating an Additional Wall Feature Using the Flat Option with Radius and Bend Relief 35
Table 3: Wall Corner Relief Options 37
3. Creating an Unattached Wall Feature and Merging It to the Model Geometry 39
References 44

Exercise 3
Bend Features – Part I 45
Objectives 45
Introduction 45
1. Bending 45
Bend Allowance and Developed Length 46
Minimum Bend Radius 46
Table 1: Minimum Bend Radius for Plate Steel and Aluminum (Room Temperature) 46
Springback 47
2. Rolling (or Roll Bending) 47
3. Bending with Pro/ENGINEER Wildfire Sheetmetal 48
Table 2: Sheet Metal Bends Descriptions 48
Table 3: Bend Relief Options 49
Procedure 50
1. Create Simple Bends 50
Table 4: Bend Feature Attributes for Modelside Bends 60
2. Creating a Simple Roll Bend Feature with Transition 63
References 68

Exercise 4
Bend Features – Part II 69
Objectives 69
Introduction 69
Bend Allowance and Developed Length 69
Unbending Geometry 70
Sheetmetal versus Solid Cuts 70
Table 1: Sheetmetal versus Solid Cut 70
Table 2: Description of the Cut Operations in Sheetmetal 71
Procedure 71
1. Creating Unbent and Bendback Features – Creating Solid Features 71
Creating a Solid Extruded Cut 73
Bending Back Geometry 75
2. Creating a Sheet Metal Cut 79
3. Setting up Flat State of the Part for the Engineering Drawing 82
4. Copying Wall Features 85
Conclusion 89
Project 90

Exercise 5
Conversion Features 91
Objectives 91
Introduction 91
Table 1: Sheetmetal Conversion Feature Options 91
Procedure 92
1. Creating Rips and Relief 92
Table 2: Corner Relief Options 96
Creating Forms in Sheet Metal 103
Table 3: Form Feature Options 103
Table 4: Form Feature Options Reference and Copy 104
Procedure 104
1. Creating the Form in Part Mode 104
2. Creating the Form Feature in Sheetmetal 106
Table 5: Constraints for Form Feature Creation 109
3. Completion of the Sheetmetal Model 113
Project 122
References 122

Exercise 6
Unbending Complex Geometry - I 123
Objectives 123
Introduction 123
Procedure 124
1. Creating wall using the conversion feature 124
2. Sketching a deformation area 131
Conclusions 137
References 138

Exercise 7
Unbending Complex Geometry - II 139
Objectives 139
Introduction 139
Procedure 140
1. Creating walls using blend wall feature 140
Part 1 140
Part 2: Cross-Section Driven Unbends 145
Conclusion 155
References 155
