<b>Table of contents</b>	<b>ii</b>
<b>Before You Start</b>	<b>1</b>
Notes on hands-on exercises and functionality of Simulation	
Prerequisites	
Selected terminology	
<b>1: Introduction</b>	<b>5</b>
What is Finite Element Analysis?	
Finite Element Analysis used by Design Engineers	
Objectives of FEA for Design Engineers	
What is SolidWorks Simulation?	
Fundamental steps in an FEA project	
Errors in FEA	
A closer look at finite elements	
What is calculated in FEA?	
How to interpret FEA results	
Units of measure	
Using online help	
Limitations of Static studies	
<b>2: Static analysis of a plate</b>	<b>31</b>
Using the SolidWorks Simulation interface	
Linear static analysis with solid elements	
Controlling discretization error with the convergence process	
Finding reaction forces	
Presenting FEA results in a desired format	

<b>3: Static analysis of an L-bracket</b>	<b>77</b>
Stress singularities	
Differences between modeling errors and discretization errors	
Using mesh controls	
Analysis in different SolidWorks configurations	
Nodal stresses, element stresses	
<b>4: Static and frequency analyses of a pipe support</b>	<b>97</b>
Use of shell elements	
Frequency analysis	
Bearing load	
<b>5: Static analysis of a link</b>	<b>121</b>
Symmetry boundary conditions	
Preventing rigid body motions	
Limitations of the small displacements theory	
<b>6: Frequency analysis of a tuning fork and a plastic part</b>	<b>131</b>
Frequency analysis with and without supports	
Rigid body modes	
The role of supports in frequency analysis	
Symmetric and anti-symmetric modes	
<b>7: Thermal analysis of a pipe connector and a heater</b>	<b>139</b>
Analogies between structural and thermal analysis	
Steady state thermal analysis	
Analysis of temperature distribution and heat flux	
Thermal boundary conditions	
Thermal stresses	
Vector plots	
<b>8: Thermal analysis of a heat sink</b>	<b>157</b>
Analysis of an assembly	
Global and local Contact conditions	
Steady state thermal analysis	
Transient thermal analysis	
Thermal resistance layer	
Use of section views in result plots	

<b>9: Static analysis of a hanger</b>	<b>173</b>
Global and local Contact conditions	
Hierarchy of Contact conditions	
<b>10: Thermal stress analysis of a bi- metal loop</b>	<b>187</b>
Thermal deformation and thermal stress analysis	
Eliminating rigid body motions	
Converting Sheet Metal bodies to Solid bodies	
"Parasolid" round trip	
Saving model in deformed shape	
<b>11: Buckling analysis of I-beam</b>	<b>197</b>
Buckling analysis	
Buckling load safety factor	
Stress safety factor	
<b>12: Static analysis of a bracket using adaptive solution methods</b>	<b>205</b>
h-adaptive solution method	
p-adaptive solution method	
Comparison between h-elements and p-elements	
<b>13: Drop test</b>	<b>223</b>
Drop test analysis	
Stress wave propagation	
Direct time integration solution	
<b>14: Selected nonlinear problems</b>	<b>231</b>
Large displacement analysis	
Analysis with shell elements	
Membrane effects	
Following and non-following load	
Nonlinear material analysis	
Residual stress	
<b>15: Mixed meshing problem</b>	<b>275</b>
Using solid and shell elements in the same mesh	
Mixed mesh compatibility	
Manual and automatic finding of contact sets	

<b>16: Analysis of a weldment using beam elements</b>	<b>283</b>
Different levels of idealization implemented in finite elements	
Preparation of a SolidWorks model for analysis with beam elements	
Beam elements and truss elements	
Analysis of results using beam elements	
Limitations of analysis with beam elements	
<b>17: Review of 2D problems</b>	<b>309</b>
Classification of finite elements	
2D axi-symmetric element	
2D plane stress element	
2D plane strain element	
<b>18: Vibration Analysis - Modal Time History and Harmonic</b>	<b>345</b>
Modal Time History analysis (Time Response)	
Harmonic analysis (Frequency Response)	
Modal Superposition Method	
Damping	
<b>19: Analysis of random vibration</b>	<b>375</b>
Random vibration	
Power Spectral Density	
RMS results	
PSD results	
Modal excitation	

<b>20: Miscellaneous topics</b>	<b>395</b>
Mesh quality	
Solvers and solvers options	
Displaying mesh in result plots	
Automatic reports	
E drawings	
Non uniform loads	
Frequency analysis with pre-stress	
Shrink fit analysis	
Rigid connector	
Pin connector	
Bolt connector	
Remote load/mass	
Weld connector	
Bearing connector	
Circular symmetry	
Strongly nonlinear problem	
Submodeling	
Terminology issues in the Finite Element Analysis	
<b>21: Implementation of FEA into the design process</b>	<b>459</b>
Verification and Validation of FEA results	
FEA driven design process	
FEA project management	
FEA project checkpoints	
FEA reports	
<b>22: Glossary of terms</b>	<b>477</b>
<b>23: Resources available to FEA users</b>	<b>485</b>
<b>24: List of exercises</b>	<b>489</b>
