Table of contents ii

Before You Start 1
- Notes on hands-on exercises and functionality of Simulation
- Prerequisites
- Selected terminology

1: Introduction 5
- Heat transfer by conduction
- Heat transfer by convection
- Heat transfer by radiation
- Thermal boundary conditions
- Analogies between thermal and structural analysis
- Thermal elements: solids and shells
- Scalar and vector entities, presenting results
- Steady state thermal analysis
- Transient thermal analysis
- Linear thermal analysis
- Nonlinear thermal analysis

2: Hollow plate 21
- Heat transfer by conduction
- Heat transfer by convection
- Different ways of presenting results of thermal analysis
- Convergence analysis in thermal problems
- Solid elements in heat transfer problems
- Shell elements in heat transfer problems

3: L bracket 33
- Heat transfer by conduction
- Use of 2D models
- Singularities in thermal problems

4: Thermal analysis of a round bar **41**

Heat transfer by conduction
Thermal conductivity
Heat transfer by convection
Convection boundary conditions
Thermal resistance
Prescribed temperature boundary conditions
Heat power
Heat flux

5: Floor heating duct – part 1 **57**

Heat transfer by conduction
Prescribed temperature boundary conditions
Heat power
Heat flux
Heat flux singularities
Analogies between structural and thermal analysis

6: Floor heating duct – part 2 **75**

Heat transfer by convection
Free and forced convection
Convection coefficient
Ambient (bulk) temperature

7: Hot plate **85**

Transient thermal analysis
Conductive heat transfer
Convective heat transfer
Heat power
Thermostat
Thermal inertia

8: Thermal and thermal stress analysis of a coffee mug **101**

Transient thermal analysis
Thermal stress analysis
Thermal symmetry boundary conditions
Structural symmetry boundary conditions
Use of soft springs

9: Thermal and thermal buckling analysis of a link **113**
Buckling caused by thermal effects
Interpretation of Buckling Load Factor

10: Thermal analysis of a heat sink **121**
Analysis of an assembly
Thermal contact conditions
Steady state thermal analysis
Transient thermal analysis
Thermal resistance layer
Thermal symmetry boundary conditions

11: Radiative power of a black body **137**
Heat transfer by radiation
Emissivity
Black body
Radiating heat out to space
Transient thermal analysis
Heat power
Heat energy

12: Radiation of a hemisphere **149**
Heat transfer by radiation
Emissivity
Radiating heat out to space
View factors
Heat power

13: Radiation between two bodies **157**
Heat transfer by radiation
Emissivity
Radiating heat out to space
View factors
Heat power
Closed system
Open system

14: Heat transfer with internal fluid flow **171**
Introduction to Flow Simulation
Using Flow Simulation for finding convection coefficients in internal fluid flow
Interfacing between Flow Simulation and Thermal analysis
Interfacing between Flow Simulation and structural (Static) analysis

15: Heat transfer with external fluid flow **215**
Using Flow Simulation for finding convection coefficients in external fluid flow
Interfacing between Flow Simulation and Thermal analysis

16: Radiative Heat Transfer **231**
Radiative heat transfer problem analyzed with Thermal Study in Simulation
Radiative heat transfer problem analyzed with Flow Simulation

17: NAFEMS Benchmarks **251**
Importance of benchmarks
One dimensional heat transfer with radiation
One dimensional transient heat transfer
Two dimensional heat transfer with convection

18: Summary and miscellaneous topics **269**
Summary of exercises in chapters 1-13
Nonlinear transient problems
Advanced options of thermal study
Closing remarks

19: Glossary of terms **287**

20: References **289**

21: List of exercises **290**
