Preface	xi
Intended Audience for this Text Using this SOLIDWORKS Simulation User Guide Instructor's Preface	xi xi xiii
Introduction	
Finite Element Analysis Nodes, Elements, Degrees of Freedom, and Equations SOLIDWORKS Simulation Elements Solid Elements Solid Element Degrees of Freedom Shell Elements Degrees of Freedom Beam and Truss Elements Meshing a Model Stress Calculations for Nodes and Elements Nodal Stress Values Element Stress Values	I-1 I-2 I-3 I-4 I-5 I-6 I-6 I-7 I-8 I-9 L-10
Assumptions Applied to Linear Static Finite Element Analysis Static Loading Linear Material Behavior Small Deformations Closing Comments Introduction to the SOLIDWORKS Simulation User Interface Orientation and Set-up of SOLIDWORKS Work Environment	I-10 I-11 I-11 I-12 I-12 I-12 I-13 I-13
Customizing the SOLIDWORKS Screen Orientation to the SOLIDWORKS Simulation Work Environment Property Managers and Dialogue Boxes Cautions and Other Facts You Should Know	I-16 I-20 I-23 I-25

Chapter 1 Stress Analysis Using SOLIDWORKS Simulation

Learning Objectives	1-1
Problem Statement	1-1
Creating a Static Stress Analysis (Study)	1-3
Assigning Material to the Model	1-6
Applying Fixtures	1-7
Applying External Loads	1-9

Analysis of Machine Elements Using SOLIDWORKS Simulation

Meshing the Model	1-12
Running the Solution	1-14
Examination of Results	1-15
Understanding Default Graphical Results	1-15
Results Predicted by Classical Stress Equations	1-17
Simulation Results for Stress in Y-Direction	1-19
Using the Probe Tool	1-21
Customizing Graphs	1-28
Summary	1-31
To SAVE or Not to SAVE Files, That is the Question?	1-31
Option 1 - Close a File and SAVE its Contents Using the Original File Name	1-32
Option 2 - Close a File and SAVE its Contents Using a Different File Name	1-32
Option 3 - Close a File without Saving Results	1-33
Option 4 - Re-open a SOLIDWORKS Simulation File Saved Using Option 1	
or Option 2	1-33
Exercises	1-35

Chapter 2 Curved Beam Analysis

Learning Objectives	2-1
Problem Statement	2-1
Creating a Static Analysis (Study)	2-2
Setting up the Simulation Toolbar	2-3
Assign Material Properties to the Model	2-5
Applying Fixtures	2-6
Applying External Load(s)	2-8
Inserting Split Lines	2-9
Applying Force to an Area Bounded by Split Lines	2-12
Meshing the Model	2-13
Solution	2-15
Examination of Results	2-16
Analysis of von Mises Stresses Within the Model	2-16
Verification of Results	2-19
Results Predicted by Classical Stress Equations	2-19
Comparison with Finite Element Results	2-21
Assessing Safety Factor	2-25
Alternate Stress Display Option	2-31
Determining Reaction Forces	2-32
Is it Significant That the Model is NOT in Equilibrium?	2-33
Soft Springs Can Be Applied Where Other Restraints are not Appropriate	2-34
Important Caution Regarding Strength and Safety Factor	2-35
Logging Out of the Current Analysis	2-35
Exercises	2-36

Chapter 3 Stress Concentration Analysis

Learning Objectives	3-1
Problem Statement	3-1
Create a Static Analysis (Study)	3-2
Defeaturing the Model	3-3
Assign Material Properties to the Model	3-4
Apply Fixtures and External Loads	3-4
Mesh the Model	3-6
Solution	3-8
Examination of Results	3-8
Stress Plots	3-8
Creating a "Copy" of a Plot	3-12
Displacement Plot	3-14
Creating New Studies	3-17
Basic Parts of the Graphical User Interface	3-17
Study Using High Quality Elements and COARSE Mesh Size	3-18
Study Using High Quality Elements and DEFAULT Mesh Size	3-23
Study Using High Quality Elements and FINE Mesh Size	3-24
Study Using High Quality Elements and MESH CONTROL	3-25
Summary	3-29
Results Analysis	3-30
Create Multiple Viewports	3-30
What Can Be Learned from this Example?	3-33
Other Uses of the Copy Feature	3-33
Analysis Insight - Solution Convergence	3-33
Comparison of Classical and FEA Results	3-36
Logging Out of the Current Analysis	3-37
Exercises	3-38

Chapter 4 Thin and Thick Wall Pressure Vessels

Learning Objectives	4-1
Thin-Wall Pressure Vessel (Using Shell Elements)	4-1
Problem Statement	4-1
Understanding System Default Settings	4-4
Creating a Static Analysis Using Shell Elements	4-10
Converting a Solid Model to a Shell Model	4-11
Open a New Simulation Study	4-15
Assign Material Properties	4-15
Define Shell Thickness	4-15
Assign Fixtures and External Loads	4-16
Restraints Applied Using Reference Geometry	4-16

Pressure Load Applied	4-20
Solution	4-21
Results Analysis	4-23
Results Comparison (Tangential Stress = σ_1 on Cylindrical Surface)	4-25
Other Meaningful Results Comparisons	4-23
Guidance for Determining Symmetry Fixtures	4-27
Application of Symmetry Fixtures	4-29
Closing Observations	4-30
Log Out of the Current Analysis	4-31
Thick Wall Pressure Vessel	4-32
Problem Statement	4-32
Defining the Study	4-33
Assign Material Properties	4-34
Define Fixtures and External Loads	4-34
Create a Duplicate Study	4-37
Mesh the Model – Default Size Standard Mesh	4-37
Mesh the Model – Fine Size Standard Mesh	4-38
Solution	4-40
Results Analysis	4-40
Displacement Analysis	4-40
von Mises Stress Analysis	4-42
Tangential Stress Analysis	4-42
Adjusting Stress Magnitude Display Parameters	4-45
Using Section Clipping to Observe Stress Results	4-48
Thick Wall Pressure Vessel (Axisymmetrical Approach)	4-52
Problem Statement	4-52
Thick-Wall Pressure Vessel	4-52
Create a Static Analysis (Study)	4-53
Assign Material Properties	4-54
Define Fixtures and External Loads	4-54
Mesh the Model – Standard Size Standard Mesh	4-55
Solution	4-56
Results Analysis	4-56
Exercises	4-59

Chapter 5 Interference Fit Analysis

Learning Objectives	5-1
Problem Statement	5-1
Interference Check	5-2
Create a Static Analysis (Study)	5-3
Assign Material Properties to the Model	5-4

SOLIDWORKS Default Connection Definition	5-4
Defeature and Simplify the Model	5-5
Apply Fixtures	5-6
Reduce Model Size Using Symmetry	5-6
Define Symmetry Restraints (Fixtures)	5-7
Apply Fixtures to Eliminate Rigid Body Motion	5-9
Use Contact Sets to Define a Shrink Fit	5-11
Mesh the Model and Run the Solution	5-14
Examination of Results	5-15
Default Stress Plot	5-15
Stress Plots in a Cylindrical Coordinate System	5-18
Tangential (Circumferential or Hoop) Stress	5-18
Radial Stress	5-21
Verification of Results	5-23
Stress Predicted by Classical Interference Fit Equations	5-23
Stress Predicted by Finite Element Analysis	5-24
Radial Stress Comparison	5-24
Tangential Stress Comparison	5-26
Quantifying Radial Displacements	5-27
Generating a Report	5-30
Exercises	5-32

Chapter 6 Contact Analysis

Learning Objectives	6-1
Problem Statement	6-1
Preparing the Model for Analysis	6-2
Add Reference Planes	6-3
Insert Split Lines	6-4
Create the Assembly Model	6-5
Cut Model on Symmetry Plane	6-10
Create a Finite Element Analysis (Study)	6-13
Assign Material Properties	6-13
Assign Fixtures and External Loads	6-13
Symmetry and Immovable Restraints	6-13
Connections Define Contact Conditions	6-14
Apply a Directional Load	6-16
Mesh the Model and Run the Solution	6-19
Results Analysis	6-19
Von Mises Stress	6-19
Iso Clipping	6-20
Animating Stress Results	6-22
Displacement Results	6-23
Contact Pressure/Stress	6-24
Exercises	6-26

Chapter 7 Bolted Joint Analysis

Learning Objectives	7-1
Problem Statement	7-1
Create a Static Analysis (Study)	7-2
Assign Material Properties to the Model	7-2
Apply External Loads and Fixtures	7-3
Traditional Loads and Fixtures	7-3
Define Bolted Joint Restraints	7-4
Define Local Contact Conditions	7-11
Mesh the Model and Run Solution	7-13
Results Analysis for the Downward External Load	7-16
von Mises Stress	7-16
Bolt Forces (for Downward Load)	7-18
Define a New Study with the Applied Force Acting Upward	7-19
Results Analysis for the Upward External Load	7-20
von Mises Stress	7-20
Bolt Forces (for Upward Load)	7-23
Bolt Clamping Pressure	7-26
Summary	7-30
Exercises	7-31

Chapter 8 Design Optimization

Learning Objectives	8-1
Problem Statement	8-1
Complete and Run the Initial Study	8-2
Creating an Optimization Design Study	8-6
Understanding Optimization Design Terminology	8-7
Selecting and Specifying Design Parameters (Variables)	8-9
Define Constraints and their Sensors	8-14
Define the Stress Constraint and Sensor	8-14
Define the Displacement Constraint and Sensor	8-15
Define a Goal and its Sensor	8-17
Overview of Results	8-18
General Observations	8-19
Local Trend Graphs	8-20
Local Trend Graph of the Design Goal versus a Design Variable	8-20
Local Trend Graph of a Constraint versus a Design Variable	8-21
Closing Observations	8-23
Exercises	8-25

Chapter 9 Elastic Buckling

Problem Statement9-1Opening SOLIDWORKS9-2Create a Buckling Analysis (Fixed-Free End Conditions)9-2Assign Material Properties to the Model9-3External Loads9-3Buckling Analysis Options9-4Meshing the Model9-4Solution9-5Examination of Results9-6Buckling Mode Shapes (Optional)9-7Validity of Elastic Buckling Simulation9-11Assign Material Properties to the Model9-11Assign Material Properties to the Model9-11Prepare the Model for Assignment of Fixed-Fixed End Conditions9-12Assign Fixed-Fixed Fixture to Top End of Model9-13External Loads9-15Meshing and Running the Model9-15Meshing and Running the Model9-17Validity of Elastic Buckling Simulation9-17Create a Buckling Analysis Using Pinned-Pinned End Conditions9-19Assign Material Properties to the Model9-19Prepare the Model for Assignment of Pinned-Pinned End Conditions9-19Assign Material Properties to the Model9-19Prepare the Model for Assignment of Pinned-Pinned End Conditions9-19Assign Material Properties to the Model9-22Meshing and Running the Model9-22Meshing and Running the Model9-22Meshing and Running the Model9-22Meshing and Running the Model9-22Suckling Mode Shapes9-24Validity of Elastic Buckling Simulation9-25Create a Buckling	Learning Objectives	9-1

Exercises 9-32	Summary	9-31
2.1.0101000 / 02	Exercises	9-32

Chapter 10 Fatigue Testing Analysis

Learning Objectives	10-1
Problem-1: Fatigue Analysis of a Cylindrical Rod Subject to Reversed Bending	10-1
Creating a Static Analysis (Study)	10-2
Assign Material Properties to the Model	10-2
Applying Fixtures and External Loads	10-3
Meshing the Model	10-4
Static Solution	10-5
Fatigue Study	10-5
Add Event	10-5
Generating the SN-Curve	10-6
Navigating the SN-Curve Calculator	10-7
Setting Fatigue Study Parameters	10-10
Fatigue Study Solution	10-11
Verification of Results	10-12
Problem-2: Fatigue Analysis of a Cylinder Subject to a Combined Loading	10-15
Duplicating the Static Analysis (Study) and Fatigue Studies	10-15
Modifying External Load(s)	10-16
Modifying Fatigue Study Parameters	10-17
Edit Fatigue Event	10-17
Setting Fatigue Study Parameters	10-17
Modifying the SN-Curve	10-18
Fatigue Study Solution	10-20
Verification of Results	10-21
Exercises	10-23

Chapter 11 Thermal Stress Analysis

Learning Objectives	11-1
Problem Statement	11-1
Static Analysis	11-2
Material Properties Applied to the Model	11-2
Assign Connection in the Model	11-3
Assign Fixtures to the Model	11-4
External Loads (Method-1)	11-4
External Loads (Method-2)	11-6
Material Properties Applied to the Model	11-6
Applying Thermal Loads for Uniform Temperature	11-6
Solve the Thermal Study and Apply the Solution	11-8
Apply Mesh for Thermal Study	11-10
Reference Temperature at Zero Strain	11-10
Examination of Results	11-11
Default Stress Plot	11-11
Stress Plots in a Cylindrical Coordinate System	11-12

Validation of Radial Stress Results Validation of Axial Displacement Results Exercises	11-16 11-17 11-18
APPENDIX A Organizing Assignments Using MS Word [®]	A-1
APPENDIX B Alternative Method to Change Screen Background Color	B-1
INDEX	Index-1
